Paing Soe Khant

Chiang Rai, Thailand | 6631503082@lamduan.mfu.ac.th | github.com/pskpsk009

Summary

Software Engineering student at Mae Fah Luang University who builds full-stack web and mobile apps with React, React Native, TypeScript, Supabase, and Firebase. Recently built an AI calorie tracker using Google Gemini and PostgreSQL. Seeking a software engineering internship where I can contribute to a product team and keep growing as an engineer.

Education

Mae Fah Luang University Chiang Rai, Thailand
Bachelor of Engineering in Software Engineering *Expected 2027*

- Available for full-time, credit-bearing co-op from Jan 2027 (4+ months) | IELTS 7.0

Skills

Languages: TypeScript, JavaScript, SQL, Python, C#
Frontend and Mobile: React, React Native, Expo, Expo Router, Reanimated, Vite, TanStack Start, Chart.js
Backend and Data: Node.js, Express.js, REST APIs, Supabase (PostgreSQL, Auth, Storage, Edge Functions), Firebase, Google Gemini API
Testing and Tools: Jest, Cypress, Git, GitHub, VS Code, npm

Projects

AI Calorie Tracker | *React Native, Expo, TypeScript, Supabase, PostgreSQL, Gemini API, Jest* GitHub

- Built a mobile app that turns a meal photo into per-item calories and macros using Google Gemini vision, called through a Supabase Edge Function with auth checks, retries, and fallback.
- Designed a PostgreSQL schema with row-level security on every table, private image storage through signed URLs, and a trigger that logs dated weight history.
- Built a weekly dashboard for nutrition, walking, BMI, and weight trends, with per-user time zone support (including daylight saving) .
- Added email sign-in with deep-link confirmation and password reset, and validated AI output before saving it to the database.

MyGrowth (BetterDays) | *React Native, Expo, TypeScript, Supabase, Reanimated* GitHub

- Led development of a five-tab student well-being app with 39 guided activities, built from a written requirements backlog and design documents.
- Built a Trail tracker that maps walks using GPS outdoors or motion sensors indoors, and shares trail images to a public gallery through Supabase Storage.
- Designed a content-driven architecture: activities are configuration rendered by reusable templates, so most new activities need no new screen code.
- Animated guided exercises with Reanimated, such as a Breathing Bubble synced to breathing phases and Daily Stretch routines that advance automatically.

SE Project Hub | *React, TypeScript, Express.js, Firebase, Supabase, Tailwind CSS* GitHub

- Collaborated on a full-stack platform for capstone and competition project submissions, advisor reviews, and rubric-based grading, with a draft → under review → approved/rejected workflow.
- Contributed to role-based dashboards for students, advisors, and coordinators covering project submission, advisee review, user and course management, student rosters, and reports.
- Worked on a TypeScript Express.js REST API with Zod validation, Helmet, and rate limiting, secured by Firebase Authentication (email/password and Google) with Admin SDK token checks and role-based custom claims.
- Modeled a relational schema in Supabase Postgres for projects, team members, files, comments, and multi-level rubrics, and used Supabase Storage for project deliverables.
